### Product description

The FLECK Solarflex universal cable feedthrough is a ready to install, very flat, push-on cable feedthrough for pitched roofs.

With an overall height of only 40 mm, it provides a particularly unobtrusive and weather-protected solution for the laying of technical connection cables in a pitched roof. The flexible ECO FORM collar, size 600 (L) × 500 (W) mm, installed in the factory can be cleanly shaped to fit virtually any roof tile. The DN 125 connection socket provides sufficient space for secure, strain-free laying of up to 10 individual cables (Ø max. 7 mm) and the push-on design ensures convenient assembly. The push-on and removable cover also prevents access to small animals. Ideal for modern roofs with high aesthetic and functional requirements and, thanks to the low overall height, perfectly suitable for use under solar modules.

- Push-on and removable cover for fast, secure cable laying and inspection
- Very flat construction: only 40 mm overall height
- Flexible collar made of ECO FORM, size 600 (L) mm × 500 (W) mm
- Colour: black
- Can be cleanly shaped to fit virtually any roof tile

### Areas of use

- Use on all pitched roofs with standard roof pitch or steeper
- For strain-free feedthrough of technical cables (max. 10 cables with Ø up to 7 mm)

### Material

- Feedthrough made of weather-resistant, durable polypropylene (PP)
- Flange made of environmentally friendly ECO FORM material (rolled lead substitute), universally adaptable
- Colour: black

### Construction material class

- B2 as per DIN 4102-4

### Technical notes

- To open the feedthrough, it may be necessary to push the opposite roof tile upwards and return it to the correct position after completing the installation. Refer to the figure on page 2.
- Use of screws with a sealing washer is recommended for fixing on the roof battens!
